# Academic Integrity Statement

I, undersigned, hereby declare that this capstone project is the result of my own work.

- All ideas, data, figures and text from other authors have been clearly cited and listed in the bibliography.
- No part of this project has been submitted previously for academic credit in this or any other institution.
- All code, diagrams, and third-party materials are either my original work or are used with permission and properly referenced.
- I have not engaged in plagiarism or any form of academic dishonesty.
- Any assistance received (e.g. from peers, tutors, or online forums) is acknowledged in the acknowledgements section.

I understand that failure to comply with these declarations constitutes academic misconduct and may lead to disciplinary action.

Place, date    Kyiv, 27.05.2026

# Acknowledgements

First of all, I want to thank my parents. For giving me the opportunity to study at such a great university, for their support every single time, for always believing in me when I didn't believe in myself - they always knew I would make it. They have always been my biggest role models in life, and everything I have now is because of them. I also want to thank my mom for being someone I can tell absolutely everything to - every secret, every worry, every thought. And I want to thank my dad for teaching me tennis when I was a child - that's what led me to become the head of the KSE Table Tennis Club and find amazing friends at university, who made these student years the best ones.

I want to thank my grandparents - they were always ready to help me with anything, and were even willing to learn how to code just to make things easier for me. Thank you for the fact that when I had classes until 9 PM, I could get to Akademmistechko in 20 minutes instead of an hour and a half, and thank you for always cooking so much and so well every time I came over, as if it was a wedding and not just my last class of the day. I want to thank my brother for always showing up - early or late - even though he wasn't a student here at that moment, just to help or support me.

I want to thank Veronika Anepska for absolutely everything - for always listening to me, for every party, every conversation, every idea, for believing in each other and supporting each other. Together we built discipline - not just opening TikTok every day to keep our streak alive, but also learning Italian every day, doing yoga every day, setting goals and reaching them together. I'm really happy that this diploma was made with you. I'm sure we have an amazing future ahead, because we're doing everything to make it happen.

I want to thank Bohdana Seheda for sitting next to me in an extra English class in first year and Maryna Chernetska for the fact that we were brought together in first year by the same problem - neither of us understood anything. Those small things helped me find such great friends.

Thank you to Ivan Suprun - after talking to you, everything always feels lighter. Thank you to Marko Hlibovytskyi for always telling me I would be fine when I felt like giving up, and for helping me install Windows when I needed it.

I really want to thank the EBD27 and BE27, and my Verkhovyna company. Thank you to Daria Kozlova for the Integration parties, for Halloween vampires, and for inviting me in my fourth year to get through the hard winter moments and the power outages at Hotel Verkhovyna together. Thank you to Dmytro Shevchuk, Matvii Onyshchenko, Artem Litskevych, Dmytro Vasylchuk, Oleksandr Siryi - you are the best. Every holiday, every party, every memory with you is one of the best in my life. Thank you for every tennis game, every good lunch, every conversation, You are all absolute legends. Thank you to Oleh Skakun for always cheering me up and for driving me home.

Thank you to my friend from Italy, Gabriel, whom I met just before the full-scale invasion started - for helping me feel more confident, for every Eurovision night, for respecting my family and my country, and for the invitation to Italy. Thank you also to my friend from Spain, Markel - I'm sure we will meet someday too.

Thank you to Polina Mamchur, Sofiia Tyshchenko, Sofiia Krotova, Yaroslava Mala and Kateryna Shashkina for every moment we went through together, for finding something positive even during the worst deadline weeks, and for always helping.

I also want to thank Kateryna Pyvovarova for our conversation on the 5th floor of KSE - it was you who came up with the Soulmate feature idea, and I'm really glad that conversation happened.

Thank you to absolutely everyone who came into my life during these years and made it the best it could be - in such difficult times.

# Abstract

Modern film and TV viewers face a fragmented viewing experience: tracking what they have watched, what they want to watch, and what to watch next is split across phone notes, social media saves, and disconnected rating services. A survey of 262 respondents conducted as part of this work confirmed the problem: 49.8% rely on phone notes to track films and 83.6% discover content through social media rather than dedicated platforms. Existing solutions such as Letterboxd, IMDb, and TV Time each cover only part of the user journey and suffer from weak personalization, limited social interaction, or incomplete coverage of both films and TV series within a single catalog.

This capstone project documents the complete development of **MovieCrush** - a cross-platform mobile application that unifies film and TV tracking, personalized recommendations, social discovery, and personal analytics in one product. The resulting system was implemented as a fully functional product featuring: a hybrid recommendation engine combining ALS collaborative filtering with TMDb Discover candidate generation and Google Gemini re-ranking, annual “Wrapped”-style analytics with personal viewing statistics, a Soulmate feature that matches users by taste similarity, an onboarding flow that solves the cold start problem through actor selection and rating elicitation, and a social layer with follows, detailed ratings with comments, and shared lists. The technical implementation utilized React Native with TypeScript for the mobile client, a Node.js and Express backend, a PostgreSQL database, and a dedicated Python microservice running the collaborative filtering model.

To validate the concept, three complementary research methods were applied before development began: a quantitative survey of 262 respondents, five qualitative in-depth interviews, and a structured competitor gap analysis covering Letterboxd, IMDb, TV Time, and Moviebase. The recommendation model was initially trained on synthetically generated rating data to simulate early-stage user behavior and validate recommendation quality before large-scale user adoption. The model was evaluated using ROC AUC, achieving a score of 0.877 - substantially above the random baseline of 0.5. Furthermore, user research established Product-Segment Fit for the target audience of 18-24 year old viewers in Ukraine, with 75.5% of respondents willing to pay for a premium tier. Ultimately, the resulting production-ready application demonstrates that a single mobile product can replace the multiple disconnected tools currently used by viewers and deliver a personalized, socially-aware film discovery experience grounded in measurable user research.

# 1 | Introduction

*Your introduction serves to introduce the topic of your Bachelor thesis and to arouse the reader's curiosity with an overview. Why it is important and how it is structured, we explain here.*

*You can consider an introduction as a teaser for your bachelor thesis. You arouse interest and give a foretaste by presenting your motivation, your method and the state of research in your introduction.*

*Convince your examiners already in the introduction that your Bachelor thesis will be exciting. If your professor starts reading your thesis with anticipation and interest, the chances of getting good grades are higher.*

*Pay particular attention to the following in your introduction:*

- **Introduce the topic** - What characterizes the topic?
- **Introduce the goal** - What do you want to achieve with your thesis?
- **Make the reader curious** - What motivates the reader to read on?
- **Describe the relevance** - Why is this bachelor thesis scientifically relevant?

*The introduction should have the following content:*

- **Initial situation presentation of the topic** - You introduce the topic with an exciting 'bait'. You provide initial information on the topic and the object of research and explain the current state of research.
- **Relevance of the topic motivation** - You justify the relevance of your topic (scientifically) and place it in the context of your field. In addition, it is often required that you disclose your personal motivation.
- **Objectives** - Your introduction should clearly state what the goal of your paper is and what outcome you hope to achieve upon completion of the bachelor thesis.
- **Method** - You explain the approach and justify the choice of method.
- **Structure of the Bachelor's thesis** - Finally, you give the reader a general overview of your Bachelor's thesis by explaining the structure, showing the red thread and how the research question is answered.

Welcome to the template's introductory chapter! Instead of boring you with lorem ipsum, here's a quick guide to what you can do in Typst and, more specifically, in this template.

Need more? Check out the [Guide to Typst](#).

## 1.1 Basic markup

Typst lets you create bold, italic, or monospaced text with ease. You can also sprinkle in equations like  $e^{i\pi} + 1 = 0$  or even inline code like `fn main() { println!("Hello, World!") }`. And because life is better in color: pink, blue, yellow, orange, green, and more! **Boldly** colorize!

You can also write numbered or unnumbered lists:

- First item
- Second item
  1. First Subitem

- 2. Second Subitem
- Third item

Need equations? Sure! They look great as blocks too:

$$\sin(x) = x - \frac{x^3}{3!} + \frac{x^5}{5!} - \dots = \sum_{n=0}^{\infty} \frac{(-1)^n}{(2n+1)!} x^{2n+1}$$

## 1.2 Images

As they say, a picture is worth a thousand words. Let's add one:

Figure 2: Project logo

## 1.3 Tables

Tables are great for organizing data. From simple to complex, Typst handles them all:

| Name            | Age | City   |
|-----------------|-----|--------|
| Albert Einstein | 25  | Bern   |
| Marie Curie     | 22  | Paris  |
| Isaac Newton    | 30  | London |

Table 1: Simple table

| [31:27] |  |    | [24:20] |     | [19:15] | [14:12] | [11:7] |        | [6:0] |  |
|---------|--|----|---------|-----|---------|---------|--------|--------|-------|--|
| funct5  |  | aq | rl      | rs2 | rs1     | funct3  | rd     | opcode |       |  |
| 5       |  |    |         | 5   | 5       | 3       | 5      | 7      |       |  |

Table 2: Complex table

## 1.4 Boxes

Highlight key points with these fun boxes (and more):

Infobox: For highlighting information.

Ideabox: Share a brilliant idea.

Warningbox: Proceed with caution!

Firebox: This is 🔥 !

Rocketbox: Shoot for the moon!

Todobox: Just do it!

**TODO**

Personnal todo before marking this thesis as final

## 1.5 Citations, Acronyms and Glossary

Add citations with @ like [1] or [1, p.7ff] (stored in **/tail/bibliography.bib**).

Acronym terms like **Infotronics (IT)** expand on first use and abbreviate after **IT**. Glossary items such as **Rust Programming Language (Rust)** can also be used to show their description as such: Rust is a modern systems programming language focused on safety, speed, and concurrency. It prevents common programming errors such as null pointer dereferencing and data races at compile time, making it a preferred choice for performance-critical applications.. Acronyms and glossary entries auto-generate at the document's end (defined in **/tail/glossary.typ**).

## 1.6 Code

Besides writing inline code as such `fn main() { println!("Hello World") }` you can also write code blocks like this:

```

1 fn main() {
2     let ship = Starship::new("USS Rustacean", (0.0, 0.0, 0.0));
3     let destination = (42.0, 13.0, 7.0);
4     let warp = ship.optimal_warp(ship.distance_to(destination));
5
6     println!("👉 {} traveling to {:?} at Warp {:.2}", ship.name, destination,
7 warp);
8     if warp <= 9.0 {
9         println!("🚀 Warp engaged!");
10    } else {
11        println!("⚠ Warp failed!");
12    }
13 }
```

Listing 1: First part of the USS-Rustacean code

or directly from a file

```

1 struct Starship {
2     name: String,
3     position: (f64, f64, f64),
4 }
5
6 impl Starship {
7     fn new(name: &str, position: (f64, f64, f64)) -> Self {
8         Self {
9             name: name.into(),
10            position,
11        }
12    }
13    fn distance_to(&self, dest: (f64, f64, f64)) -> f64 {
14        ((dest.0 - self.position.0).powi(2)
15         + (dest.1 - self.position.1).powi(2)
16         + (dest.2 - self.position.2).powi(2))
17        .sqrt()
18    }
19    fn optimal_warp(&self, distance: f64) -> f64 {
20        (distance / 10.0).sqrt().min(9.0)
21    }
22 }
```

Listing 2: Second part of the USS-Rustacean code from `/resources/code/uss-rustacean.rs`

## 1.7 Context Problem

Haute École d'Ingénierie (HEI) Rust Rust programs

[1], [1, p.7ff]

```

fn main() {
    println!("Hello World!");
}
```

Lorem ipsum dolor sit amet, consectetur adipiscing elit, sed do eiusmod tempor incididunt ut labore et dolore magnam aliquam quaerat voluptatem. Ut enim aequale doleamus animo, cum corpore dolemus, fieri tamen permagna accessio potest, si aliquod aeternum et infinitum impendere malum nobis opinemur. Quod idem licet transferre in voluptatem, ut.

## 2 | Research

*In this section, you perform a State of the Art investigation of your domain to understand what's been built, how it works, and where it falls short. You'll survey existing solutions—tools, frameworks and approaches—then compare them against your project's requirements to justify why a new tool (and its specific feature set) is needed.*

*A focused Domain Area Research unfolds in these steps:*

- 1. Clarify your research questions and functional requirements*
- 2. Collect and review candidate solutions*
- 3. Evaluate each alternative's strengths, weaknesses, maturity and architectural style*
- 4. Group similar approaches into meaningful categories (for example, monolithic vs. microservice, commercial vs. open-source)*
- 5. Pinpoint gaps or missing features that motivate your own design*

*This process carries your initial concept through systematic research all the way to a clear, actionable set of requirements for your proposed tool.*

Lorem ipsum dolor sit amet, consectetur adipiscing elit, sed do eiusmod tempor incididunt ut labore et dolore magna aliqua quaerat voluptatem. Ut enim aequae doleamus animo, cum corpore dolemus, fieri tamen permagna accessio potest, si aliquod aeternum et infinitum impendere malum nobis opinemur. Quod idem licet transferre in voluptatem, ut.

Ut enim aequi doleamus animo, cum corpore dolemus, fieri tamen permagna accessio potest, si aliquod aeternum et infinitum impendere malum nobis opinemur. Quod idem licet transferre in voluptatem, ut.

## 2.3 Conclusion

Lorem ipsum dolor sit amet, consectetur adipiscing elit, sed do eiusmod tempor incididunt ut labore et dolore magnam aliquam quaerat voluptatem. Ut enim aequi doleamus animo, cum corpore dolemus, fieri tamen permagna accessio potest, si aliquod aeternum et infinitum impendere malum nobis opinemur. Quod idem licet transferre in voluptatem, ut.

## 3 | Design

*In this section you turn your requirements into a concrete engineering blueprint. You'll justify every major architectural choice, visualize structure with C4 diagrams for the first three layers, and map out your runtime topology so that peers can understand—and you can defend—every aspect of your system.*

1. Clarify how functional and non-functional requirements drive your high-level architecture
2. List each architectural decision (for example, “We chose microservices to enable independent scaling and deployment”) and explain why it best meets your goals
3. Include a C4 Context diagram showing your system in its environment (users, external systems, data sources)
4. Include a C4 Container diagram breaking the system into deployable units (APIs, web front end, background workers, databases) and annotate communication styles and protocols
5. Include a C4 Component diagram for your core container(s), illustrating key modules, services or libraries and their interactions
6. Describe your deployment topology: physical or cloud hosts, network zones, load-balancing, failover and backup strategies
7. Summarize your technology stack, mapping each tool or framework back to a specific container or component and noting any trade-offs (performance, community support, learning curve)
8. Outline how data flows through the system—including storage models, messaging patterns or API contracts—and note any schema or interface versioning plans
9. Address cross-cutting concerns (Security, Logging, Monitoring, Scalability) and show where they sit in your topology

*By walking through Requirements → Decisions → Diagrams → Topology, your Design section becomes a rigorous, evidence-backed foundation for the implementation that follows.*

Quod idem licet transferre in voluptatem, ut.

## 4 | Implementation

*In this section you translate your component-level designs into working code and systems. Focus on the C4 Component layer and on the details needed to show how your design was realized. Include only the most important code snippets that illustrate key patterns or algorithms, rather than full listings.*

1. *Describe the development methodology (for example, Agile or test-driven development) used to guide your implementation*
2. *Explain any prototyping or iterative strategies you applied to refine components before full-scale coding*
3. *Summarize coding standards, naming conventions and architectural patterns followed in your codebase*
4. *Present critical code snippets or configuration templates that highlight how core components were implemented (for example, key classes, interfaces or algorithms)*
5. *Detail your testing approach and quality assurance measures (unit tests, integration tests, coverage metrics)*
6. *Note any performance optimizations or profiling results for components that were bottlenecks*
7. *Outline your deployment and configuration management process for component artifacts (containerization, CI/CD pipelines)*
8. *Highlight documentation deliverables (API references, inline comments, architecture decision records) that support future maintenance*

*This section demonstrates how each component specification becomes actual, maintainable code—closing the loop from design to implementation.*

Lorem ipsum dolor sit amet, consectetur adipiscing elit, sed do eiusmod tempor incididunt ut labore et dolore magna aliqua. Quod idem licet transferre in voluptatem, ut.

## 5 | Validation

*Validation (Requirements Verification and Testing)*

*In this section you demonstrate how your implementation satisfies the initial requirements through clear testing methods and concise examples—suitable for a bachelor-level project:*

1. *Restate each key functional and non-functional requirement from your Analysis and Design sections*
2. *Describe the testing approach for each requirement (for example, unit tests, manual acceptance checks or scenario walkthroughs)*
3. *Provide concrete test cases or usage examples that show how you verify each requirement in practice*
4. *Summarize actual versus expected outcomes, indicating pass/fail status for each test*
5. *Include brief snippets of test code or sample console outputs to illustrate your procedures*
6. *Note any gaps or deviations and suggest simple fixes or areas for future improvement*
7. *If a feature wasn't intended for specific scenarios (e.g. high-load), omit unrealistic stress tests and clearly document its current limitations*

*This focused structure ties every requirement directly to validation results, using examples and methods you can realistically carry out at the bachelor level.*

## 5.1 Section 1

Lorem ipsum dolor sit amet, consectetur adipiscing elit, sed do eiusmod tempor incididunt ut labore et dolore magnam aliquam quaerat voluptatem. Ut enim aequi doleamus animo, cum corpore dolemus, fieri tamen permagna accessio potest, si aliquod aeternum et infinitum impendere malum nobis opinemur. Quod idem licet transferre in voluptatem, ut.

## 5.2 Section 2

Lorem ipsum dolor sit amet, consectetur adipiscing elit, sed do eiusmod tempor incididunt ut labore et dolore magnam aliquam quaerat voluptatem. Ut enim aequi doleamus animo, cum corpore dolemus, fieri tamen permagna accessio potest, si aliquod aeternum et infinitum impendere malum nobis opinemur. Quod idem licet transferre in voluptatem, ut.

## 5.3 Conclusion

Lorem ipsum dolor sit amet, consectetur adipiscing elit, sed do eiusmod tempor incididunt ut labore et dolore magnam aliquam quaerat voluptatem. Ut enim aequi doleamus animo, cum corpore dolemus, fieri tamen permagna accessio potest, si aliquod aeternum et infinitum impendere malum nobis opinemur. Quod idem licet transferre in voluptatem, ut.

## 6 | Conclusion

### *Conclusion*

*In this final section you bring together your work and reflect on its impact. Keep it concise, restating key points without introducing new information:*

- 1. Project Summary: Briefly recap objectives, methodology and principal results*
- 2. Alignment with Objectives: Discuss how outcomes meet initial goals, referencing requirements and design aims*
- 3. Lessons Learned and Challenges: Note any obstacles and how they informed improvements*
- 4. Limitations: Acknowledge features or scenarios beyond this scope and clearly state current system boundaries*
- 5. Future Work: Suggest practical enhancements or research directions building on your findings*

*Avoid introducing new concepts here; refer readers to the Discussion for deeper analysis.*

### **6.1 Project summary**

Lorem ipsum dolor sit amet, consectetur adipiscing elit, sed do eiusmod tempor incididunt ut labore et dolore magna aliqua. Quamquam veniam ut voluptate velit esse cillum dolore eu fugiat nulla pariatur. Excepteur sint occaecat cupidatat non proident, sunt in culpa qui officia deserunt mollit anim id est laborum.

### **6.2 Comparison with the initial objectives**

Lorem ipsum dolor sit amet, consectetur adipiscing elit, sed do eiusmod tempor incididunt ut labore et dolore magna aliqua. Quamquam veniam ut voluptate velit esse cillum dolore eu fugiat nulla pariatur. Excepteur sint occaecat cupidatat non proident, sunt in culpa qui officia deserunt mollit anim id est laborum.

### **6.3 Encountered difficulties**

Lorem ipsum dolor sit amet, consectetur adipiscing elit, sed do eiusmod tempor incididunt ut labore et dolore magna aliqua. Quamquam veniam ut voluptate velit esse cillum dolore eu fugiat nulla pariatur. Excepteur sint occaecat cupidatat non proident, sunt in culpa qui officia deserunt mollit anim id est laborum.

### **6.4 Future perspectives**

Lorem ipsum dolor sit amet, consectetur adipiscing elit, sed do eiusmod tempor incididunt ut labore et dolore magna aliqua. Quamquam veniam ut voluptate velit esse cillum dolore eu fugiat nulla pariatur. Excepteur sint occaecat cupidatat non proident, sunt in culpa qui officia deserunt mollit anim id est laborum.

# Glossary

## Programming Language

***Rust*** – Rust Programming Language: Rust is a modern systems programming language focused on safety, speed, and concurrency. It prevents common programming errors such as null pointer dereferencing and data races at compile time, making it a preferred choice for performance-critical applications. [6](#), [7](#)

## University

***HEI*** – Haute École d'Ingénierie [7](#)

***IT*** – Infotronics [6](#)
